While printing issue 34 I started to have some withdrawal. Wait, it is not what you might think. It is I just remembered it hasn't rained all day. I feel better though because I just looked outside. The weather forecast has "T-Storms" in it for the next 5 days. I bet my withdrawal goes away.

HHO Generator

I am moving right a long making my device to run the car on water even though I don't know where I will mount it. I have enough parts to make a couple of them. By the time I make the third one I should have one made right. Most of the parts are cheap enough it just fabrication some of the parts doesn't go as well as I would like. I am using Plexiglas to hold the electrodes. It has to be sawed and drilled. It tends to break sometimes when I drill it. I think I have that figured out now. It cost me some parts. I couldn't find the size of electrode wire I wanted. What I did is to get some smaller size and made it into heavier cable. I only had to make three before I figured out the easiest way to do that. Mounting the electrodes on the Plexiglas form was a little tough too. I modified the form and the second one when just fine.

I use JB-Weld or GOOP to seal the joints and it takes day to dry before I can do the next step. I am trying to do as many steps as I can before I have to wait for glue to dry. The glue is being used for a sealant so you do not want to move things while it is drying. If my planning is good I can get a lot done before I have to just stop and wait for a day before I do any more.

Waiting is what I am doing now. Well I am printing issue #34.

13-Jun-2008 7:40am 68°

Happy Friday the thirteenth! This morning I thought I heard that siren around one o'clock. This morning Kim told me that Jessica called to tell her. Kim lives on the far western edge of town and said they could just hear it if the windows are open. On the other hand Jim said he wished they would cut down that poll because it is too loud.

Weather Warning Siren

It is a good idea to have a storm warning system or Air Raid siren as I call it. Some people hear it and some don't. It is not loud enough for some and too loud for others.

With the technology today you would think they could do it through the phone system. You could just send rings through the telephones. Maybe just have the phone do one long ring or a just bunch of short rings for 5 minutes and a message if answered. Back in the 50's they did some thing like this for the fire fighters.

Maybe there is no one answer to this. The siren works for a lot of people. Jessica did call Mom and Dad. I heard it. Jim heard it. I am sure other too. Maybe the people thought a lot about this before they setup the system. Sometime I just don't know what the thought process is.

Weather stats

Power must have been out long enough for my web server to shutdown last night. The weather station kept running so I have weather data. Here is this month's data:

MONTHLY CLIMATOLOGICAL SUMMARY for JUN. 2008

Paper work

I retired over a year ago and thought that paper work was over. Not the case! I still have to do paper work. Even though I do most things using the computer there is still always paper work. I better do it so I can go on to more fun things. But I need to go have some coffee first.

12-Jun-2008 11:00am 79°

While having breakfast I noticed in the paper it was going to be nice day. Heather told me I should get out a walk. I had said that I almost walked out for breakfast. I got to the end of the driveway

and remembered I didn't have my cell phone. I walked back to the car where the cell phone was and got in. Woops, I was going to walk. Heather told me I should go up to the Farmer's Market on the Square and check it out. She said that I might run into Mark and Olivia.

Since I needed a hair cut and the never is a place to park in front of the barber shop I decided to walk and then check out the Farmer's Market as long as it was only a half a block from the barber shop.

Bob, the barber, told me if wanted to get him a gift I could bring him a bottle of wine from the Woodstock brewery. While walking through the market I saw the stand for *Salute! Farm & Vineyard*. I took a quick look and saw a sign for there wine and it was \$26+ for the one bottle. I didn't look any more because I didn't have money with me today for wine. There was another winery there from Carpentersville, IL. They had wine tasting. There was a big crowd in from of there stand.

Most of the other stands were selling plants and vegetables. Maybe I will go up their on another day and take a better look.

Nice day today

I have spent much time on my "Water in the Gas" gas project lately. I haven't finished my lawn work or planted any garden. I hear some people have pickles already. I don't remember what kind of seeds I bought three month ago.

I do see I have some rhubarb growing for pie. It is too small for a pie fro this year. Rhubarb take 2 or 3 year before you can use it. Maybe next year will be better for pie.

I have pumpkin and cucumbers to plant. Maybe I will go and get some flowers and see how they do. I might convert my pond back to a garden. When it was there before, it worked well. That is until the tree decided to cast a shadow on the whole project. The tree is gone now.

I had good luck when I had the garden in the back of the pickup before too. The sun didn't get in it at home so I would drive it work and let it get sun there. Then bring it home at night to rest. So I kind of have fresh vegetables where ever I drove.

Maybe I should look for a pickup too.

Trimmer

I just got back from Ace Hardware and I bought a coreless trimmer. After the using the Community Music Booster's discount card I think the price was right. After lunch it should have enough charge to do some trimming and edging. If you drive in a couple days and it looks a little rough maybe you should remind me that I bought this so it would look a little better.

Now I have to decide which set of instructions I should read so I can learn how to use it. I have my choice of three documents to read there is "Instruction Manual", "Mode D'emploi", and "Manual De Instruccions". I think the English version would be best for me at this time.

This is made in China so you would think that Black & Decker would have instruction in Chinese too.

I have a few minutes before I have to leave for lunch so I better study up on how to use this without chopping off a toe or something.

Tomatoes

In resent times they have been telling us about all the killer tomatoes. I thought you might to know this piece of trivia.

Each American eats approximately 22 pounds of tomatoes yearly. Over 1/2 of the tomato consumption is in the form of catsup and tomato sauce. Florida is the number one tomato producing state, closely followed by California.

15-Jun-2008 7:55am 60°

Rain again!

Birthday

We have another sweet sixteen today. Voviollca has turned 16 today. If you see her make sure you give her a big hug. Happy Birthday Voviollca!

17-Jun-2008 9:31pm 65°

Nothings to say other than there have been a couple of nice days in a row. There looks like we will get a couple more.

20-Jun-2008 11:09am 71°

We had a few drops of rain about an hour ago. The sun is shining now and the sky is clear.

Wine bottles

I have the Dandelion wine to bottle so it can age. I have asked a couple of my wine drinking friends to save me some bottles. I haven't checked back so there may be hundreds for me to pick up. The only thing I ask is that they get rinsed out.

I went out on the internet to see who was recycling wine bottles. There are only 2 companies in the US that I could find. Both are in California. California is wine country.

One of them, EverGreen Glass Co. (Stockton, CA), is a new company that is getting them from post consumer waste. You know from the recycling bins on the curb. They clean the bottles and put them on skids and sell them to the winery. Right now they are doing 50 different kind of corked wine bottles. No screw tops. They are trying to do 12,000 bottles an hour. Wow, that is a lot of wine.

Let's see 750ml bottles times 12,000 bottles an hour times 8 hours a day converted to gallons. That is over 19,000 gallons per shift. Or 96,000 bottles of wine. Wow!

I guess in France the law says they must recycle the bottles and they recycle them 12 to 15 times before they are recycled to make new bottles. It is easier there because they use water based glues for the labels. I guess it is a challenge to remove the labels in the US because of the high-tech glues.

The bottles I bought before cost me about \$25.00 for a case of 12. I have seen them for as little as \$12 dollars plus shipping and tax. It still cost about \$25.00 by the time you get them here.

It looked like EverGreen is selling bottles to the wineries for as little as \$4.00 a case. The information I found was about recycling wine bottles so I don't think I could buy them for that unless I bought a truck load.

It is nice to know that there is someone recycling else I didn't know about.

21-Jun-2008 4:06pm 82°

The weather turned out nice today. Today is the first full day of summer. I guess it needs to try to be nice for us.

Birthday

I see I have a birthday listed for today. It says Sue S. I can't remember who this is. I am sorry Sue S. I see I also have a Sue for the 23rd too. I don't remember who that is either. If you know who you are please email me and tell me. I am losing it because I remember almost everyone's birthday. Happy Birthday Sues whoever you are.

I'm not the first

New car is powered by water

Now that gas has passed \$4 a gallon, there's lot of chatter about alternative fuels, both for cars and RVs. The latest example comes from the Japanese company Genepax which claims that it's devised a system that consists of a fuel cell and a so called energy generator. The energy generator is claimed to consume water and breaks it down to hydrogen and oxygen which is fed to the fuel cell. While fuel cells are well understood and are known to work, the hydrogen generator is the issue.

As explained in an article from Reuters, hydrogen can actually be separated from water quite easily with no energy input. Just put a piece of aluminum in into some water and hydrogen will be release as the surface of the aluminum oxidizes. The problem, Reuters reports, is that such processes are not sustainable. Once the surface of the aluminum is fully oxidized, the reaction stops. After this, the material needs to be reprocessed so it can be used again. This part requires significant energy input. Genepax has not revealed details of its process, however it is believed to be along these lines. While the converted Reva [electric car](#) may indeed be able to run on water for a short time with no external inputs other than water, it's not clear how long that can actually happen. It may turn out that Genepax has come out with something revolutionary. More likely, says Reuters, "it is only showing part of the big picture right now and we aren't seeing the other part of the process that regenerates the energy generator."

Trivia

The Empire State Building gets hit by lightning an average of 23 times each year.

Bumper Snicker

My mother was a moonshiner, and I love her still.

Worth Pondering

Until you make peace with who you are, you'll never be content with what you have. -- Doris Mortman

Source: <http://www.rvtravel.com/publish/newsletter/issue332.shtml>

New Pickup in the Driveway

You saw from the picture on an earlier page that I bought a pickup. Last year my 1989 Ranger died. I like having a pickup around. They just are handy. This cost me \$1000 less than the last one. It is still a blue Ford Ranger but a 1995. It is seems to be in a lot better shape than the last one. I have a couple of things to fix. And I need to have someone check it out so there are no safety issues that I don't know about.

I have two things when I buy used transportation. First it must start. And second it must be safe. If it doesn't start the safety issues can wait. And when I mean safe I mean

that no one should get hurt because of some safety issues. Things like bad brakes exhaust leaks into the cab, wheels about to fall off and it could crash into someone. Anything I don't know about that could cause me or someone else to get hurt. If I know about it I can be very careful until I get it fixed.

Tomorrow I will look it over and wait until Monday to get insurance. I am covered but I feel better if the insurance company has this on the list.

Running on Water

Now that I have something to try to run on water I can work on this at a little faster pace. If you remember from before there really wasn't any place to mount or hook up the HHO generator on my Honda Civic Hybrid. On the Ford Ranger it isn't a much of a challenge to mount the HHO generator or to hook it up. I just need to make sure the pickup is safe to drive before I start mounting that may be in the way to have it serviced. That will be next week's project.

23-Jun-2008 8:03am 60°

Nice cool morning for going for a walk and not writing a newsletter. So I will write later.

25-Jun-2008 1:34pm 75°

I know I wrote something yesterday, but it isn't here. I must have not saved it. Hummm, I must be loosing it. I wonder if it was something profound. Oh well, its gone now!

I remember it was about the book I am reading, "How to Get More Miles per Gallon" by Robert Sikorsky, © 1978. Is says it has 282 tips of save your gas and money. I wrote a half a page but I don't want to write it again. I think it said something about slowing down on the first page.

It is a dated book so some of the information on gas prices is old. The first chart show what you would save if gas prices go up to sixty cents. I will see what I find that might be of some interest to you and report on it at another time.

Enjoy your achievements as well as your plans if you compare yourself with others, you may become vain or bitter, or always there will be greater and lesser persons than yourself.

27-Jun 2008 3:39pm 83°

Where did today go it is almost four o'clock already? This morning I was working outside for a while until the mosquitoes started to attack me. Yes, I said; "Attack me!" Most of the time the mosquitoes don't mess with me. Either they are very hungry or I am stinking just right for them.

I took the motor home out for a short drive to see if it still works. It does! I must have left something turned no because the motor home battery was dead. Not he engine battery it was the batteries that runs the stuff in the back. That

reminds me I should go out and plug it in so it gets charged. I'll be backing...That was easy!

Wet gas

I haven't talked much about my "Water in the Gas" project lately. I have the HHO generator built and ready to install. I bought a used pickup. I have a couple safety issues to fix and then I will install it and report more on it.

Pickup

I took the pickup in to get checked out Wednesday. I knew about a couple of issues and wanted a Ford mechanic to check it out. Have a Ford mechanic check it out because they might know more about Ford issues than a local mechanic. I can always fix some of the things fix by who ever I want. Or do some of it myself.

There were 3 things to fix. I fixed the twisted break line hose that could have been pinched under the coil spring in the front. No idea how some one could have missed that when they were servicing that.

I need to have the gas leak fixed. It only leaks when the fuel tank is filled to the top. It seems to be on the top of the tank. It stopped leaking as soon as I stopped filling it.

28-Jun-2008 12:44pm 81°

Nice outside. Wish I could say the same for the inside. I turned on the air conditioner a couple of days ago to cool and dry out the house. It was still on this morning and I forgot to turn it off. When I came back in I noticed it was running and set for 75° and it was 79°. So I called Tom and left him a message to check it out again. You may remember it wasn't keeping up last year and I needed to put in a new compressor. I shut it down I don't need to for now. I don't need to just exercise the air and use up my electricity.

Tom called back while I was typing he is on the way over.

Birthday

Today is Haley's birthday. Happy Birthday Haley!

29-Jun-2008 9:09am 66°

Good morning. I thought I would check my email before I head out to have breakfast with Voviollca and Anila. I see I got a new RV Travel newsletter to check out.

RV Travel

Trivia

The average RV owner pumps about 1,000 gallons of fuel a year, Robert W. Baird & Co. analyst Craig Kennison told Forbes.com several months ago. However, Kennison pointed out that a \$1 increase in the per gallon cost of gasoline is not as painful for people who can afford high-end \$300,000 motor homes.

Bill's Hints

If you have trouble getting your propane stove burner to light (or stay lit) after long storage, clean the burner with a thin bottle brush to get rid of rust flakes and carbon particles that are blocking the orifice.

Worth Pondering

There are two days about which nobody should ever worry, and these are yesterday and tomorrow.

-- Fulton Oursler

Bumper Snicker

Whenever I feel blue, I start breathing again.

Source: <http://www.rvtravel.com/publish/newsletter/issue333.shtml>

Bumper Sticker

Before I go to breakfast I have to tell you about the bumper sticker that is on that pickup I bought last week. It says; "Don't put your fingers on my truck or I'll put my truck on your fingers."

Stop Signs

While returning from breakfast...By the way I had breakfast with Frank and Lulu. Voviollca was a no show and Anila was busy.

Anyway, back to the Stop sign question. Why do we have so many Stop signs? There are so many people that just roll right through them not stopping at all. I was taught you stop behind the Stop sign or the wide white light if there is one. And then proceed slowly when it is safe. Yes I have been known to do that slow down and drive through. I think I make sure there no one there to see it.

I think we need more Yield signs. I don't think they should be everywhere. They would help traffic flow in a lot of places. It would also save fuel. Stop and go driving uses a lot more fuel.

I don't think I have seen a yield right of way sign in Woodstock in years. I think there was a few of them over in the Wheeler Street area. I remember when I use to live over there years and years ago. Wait, that was decades and decades ago when I live on Wheeler Street. Wow, when was that? No mater.

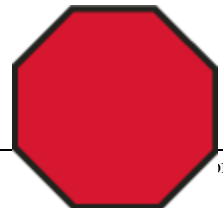

Would people understand what a Yield sign meant? Stop means to Stop and wait until you have the right-of-way to go. Yield means make sure you have the right-of-way first. It only means you do not have the right of way if there is other cars or people there first. The Yield sign was changed. It used to look like this one.

Here is what the Illinois rules of the road say about these signs.

"This three-sided sign means YIELD the right-of-way. You must let all traffic and pedestrians near you go before you proceed. YIELD signs are red and white."

"This eight-sided red sign means STOP. You must make a complete stop at the stop line. If there is no stop line, stop before entering the crosswalk. If there is no crosswalk, stop before entering the intersection. Yield the right-of-way to pedestrians and approaching traffic. If it is a four-way STOP sign,

wait your turn. If the STOP sign is hand-held, stop until an authorized person, such as a school guard or construction zone flagger, signals that it is safe to proceed."

Source: http://www.cyberdriveillinois.com/publications/rules_of_the_road/rr_chap09.html

I guess what I am saying is be safe and drive smart.

30-Jun-2008 1:51am 77°

Today is another nice day today.

1-Jul-2008 12:24pm 78°

And still another nice day.

Running with Water

Well I finally have it hooked up. My pickup is now running using the HHO generator. This means that I am running that 1995 Ford Ranger as a hybrid. Not gas and electric but gas and water. It is hooked up and it was running at 4:00pm this afternoon. Tomorrow I will be driving it and see how it goes.

I got it hooked up and it is working. I had some problems with leaks when I first hooked it up, but it is working now. I have some changes for another day. For now it works. Just like with any new idea that are few bugs to work out.

I am running using my prototype HHO generator. It has very thin electrodes so they won't last very long.

I have to rethink the one I was going to install because it has a vacuum leak that needs to be fixed. I must not have assembled it as well as I thought. It may just be the sealant I used. Tomorrow I will look it over and see if I can find the problem.

I will start checking gas mileage as well as I can. This will be a challenge because of the leak on the top of the fuel tank. I can't fill it with gas until I get it fixed. I have to get that fixed as soon as I can.

I checked and they claim that the 1995 Ford Ranger with the 2.3L(4 cylinder) engine and a stick shift should get 19 MPG - 22 MPG City and 24 MPG - 27 MPG Highway. We'll see what happen with this first tank.

RV Travel newsletter

I found some RV Travel newsletters that I haven't read so I have some of stuff for my newsletter.

2-July-2008 1:15pm 85°

They we are going to get hit on with storms today. It hasn't looked like it yet. Maybe later.

Water in the fuel

I have driven the pickup with the HHO few going through the engine. I can't tell that there is any problem. I will keep using it until I get the other HHO generator's leak fixed. It is adjustable where my prototype is not. I have a n appointment to fix the gas on the 14th. Billy is very busy so it is the first he will be able to work on it.

Air Conditioner

Tom is here today to work on the air conditioner. I guess the problem is the duct work. It was designed for a heater but not a cooler. We need to just put in some more duct work. Tom says that this should take care of the problem.

I guess the problem is like this, there is not enough air flowing across the condenser so it freezes up and the compressor stops until it thaws and it starts running again. By adding more air flow it should solve the problem. It is kind of like a cooling the engine in the car but backwards. TO cool it you need to blow the heat off the radiator. It there isn't enough air flowing it will over heat. With an air conditioner it is the same thing with cold. If not enough air flow it freezes up and shutdown until it thaws.

This is what we will be working on this afternoon.

3-Jul-2008 8:29am 60°

We got a little rain yesterday. I show we have about ½ inch already this month. We ended up with 3.82 in June. That is 1.2 inches more than the average since 2004. The weather people say that is going be nice for the next few days. I'll take it!

The End for This Issue
