## 22-Jul-2008 8:51am 66°

Well it looks as though we might have a nice weather today. There was dew on the grass when I hung my laundry out to dry this morning. Yes, I already have things on the clothesline. I only used the dryer once in 5 loads. And just so you believe I'm using my clothesline look at this picture.

### Pickup

I am waiting for a couple parts to fix that aerating alarm buzzer that keeps going off when the door is opened. The switch on the latch assembly was bad so I changed it. Then I also found out that the latch assembly needed to be replaced because where the switch slide on the plastic to make it work looked like it never was lubed and there is a groove where the switch rubbed for the last 13 years. The latch assembly is not something that could be easily taken apart. If I could have I would have tried to build the worn plastic with JB-Weld or something and saved myself some money.

Sometimes I take things apart and fix them because I can. Some times it cost me more time and money when I do it myself. You would think I would know the difference of what I should do and what I should have someone else do.

### Newsletter

You are going to wait for a few days for issue number thirty-six. This is # 37. I ran out of ink cartridges that had ink in them. I have all of the empties that Bill and Cork have given me that I had filed. Somehow I didn't notice I was getting low on refilled cartridges. I kind of treat them like I do my car. When the little light comes on saying I am very low on fuel, I wait until I have to push the car up to the pump to fill it. Yes, I have done that. The car holds 13 usable gallons of gas. I have put in more than 13 gallons a number of times.

So this time I took in 4 color and 2 black and white cartridges in to be filled. I can still use your empty cartridges if you no longer need them. Even the bad ones, I will be recycled. The ones I use are HP #'s 56(Black) and 57(color), or even #58(for photos) If I get too many I know others that are refilling

theirs too. Just don't throw them away. I will take any kind and turn them in to be recycled. Just put them in a zip-lock bag to keep the ink from getting all over you.

### **Paper Work**

Today must be paper work day. I must find a better way to do paper work. Paying bills is like doing laundry for me. When the drawer is empty it is too late. I should have done it yesterday. Never do yesterday what you can put off until tomorrow. Maybe I could quit typing about it and just do it!

### **How to Use a Clothesline**

I was wandering if I did this right so I went web surfing. This is what I found:

Skills are usually passed down from parent to child. But, what happens when a skill is lost and your parents don't know how to use a clothesline? Then people turn to search engines or the media.

Today, the NY Times ran an article entitled, to fight global warming, some use a clothesline. Unfortunately, the pictures show her using it wrong. The LA Times ran a similar article a few weeks ago in which the pictures also showed the writer using the clothesline wrong.

If you hang your shirts up right side up and clip them at the shoulders, you will have funny-looking peaks at your shoulders. Is that really what you want?

- **Hang your t-shirts up-side down** so that the clip marks are in a less noticeable location. You wouldn't want to have to iron your shirts to get those marks out. Irons draw a huge amount of wattage, negating some of your energy savings from using the clothesline in the first place.
- Smooth out your clothes while you hang them up to minimize ironing.
- Fold the top of your towels and sheets over the line slightly. That will make them more secure and less likely to blow off the line. Use more than 2 clothespins for heavy items.
- Hang your clothes in the shade. Sun fades dyes. Our grandmothers knew to hang their clothes in a covered or partly covered area so that their clothes did not fade. It also gave them more time to get the clothes inside in case it started to rain.
- Keep an eye on pollen count. If someone in your household is allergic to pollen that is flying at the time, hang your clothes inside or use your dryer. I give you permission. In our household, we dry all bedclothes and sheets inside because of our allergies.
- Wipe down your clothesline before each use. Pollution, pollen and dust cling to them.
- Indoor clotheslines make a great deal of sense in areas with afternoon thunderstorms. In fact, I knew two families in the Boulder foothills who hung their laundry indoors as a way to save energy and to humidify their homes. Who cares if you have laundry in your living room if you are at work or school?

The NY Times article was written by a woman who evidently lives less than 10 miles away from me. Her electricity bill hit \$1,120 in a single month last summer. In contrast, mine is \$50-60 per month. I've written plenty about lifestyle choices in energy use and I won't belabor the point here.

She also complained about how the wooden clothespins she initially bought fell apart quickly. I took a picture of clothespins you will find in my house. The one on the left, with the pom poms glued to it, is the style you will find most frequently in the stores. They are made in China and extremely cheap. The

other two are made in the American Midwest and harder to find. They cost twice as much as the ones from China.

I have used the one on the extreme right since 1990. I bought the one in the middle about two years ago. The American-made ones come from McGuckin Hardware in Boulder; they don't even bother to stock the cheap imported ones.

Compare the gauge of the metal used in the spring that holds the clip together. The cheap imported ones are used in my household for Iris' art projects, hence the pom poms. We would never entrust our wet and heavy laundry to the cheap clothespins. (We learned this the hard way.)

Anyway, our local Home Depot only stocks the cheap ones that you don't want to use. In case you do not live near McGuckin Hardware, you can go to your independent hardware store. Our local owner stocks only the cheap Chinese-made ones but will special order the American-made ones for you. It takes a few days, but it is worth the wait. Maybe if enough people insist on the better American-made ones, the default item stocked in stores will be the American ones.

The writer of the article also bemoaned the 7 minutes it took her to hang up her laundry. Perhaps she is one of those people who drives to the gym to lift weights. Think of it as an upper body workout.

She should also not worry about her neighborhood clothesline police. Since the California electricity crisis of summers of 1999 and 2000, the state legislature has passed a law preventing homeowner's associations from punishing clothesline users.

It is interesting that she wrote, "It looks beautiful," she said when we stepped back. "It looks like we care about the earth."

I do find hanging laundry beautiful. But we should do it because it makes sense, not to signal our environmental convictions.

### **More on Clothesline**

I found this too. My number reason was to save money after getting a \$150.00 electric bill. These are all good reason too.

#### ***TOP TEN REASONS TO HANG OUT YOUR CLOTHES***

Electric dryers use five to ten percent of residential electricity in the United States!

- 10) Save money (more than \$100/year off electric bill for most households).
- 9) Conserve energy and the environment.
- 8) Clothes and sheets smell better without adding possibly toxic chemicals to your body and the environment.
- 7) Clothes last longer. Where do you think lint comes from?
- 6) It is physical activity which you can do in or outside.
- 5) Sunlight bleaches and disinfects.
- 4) Indoor racks can humidify in dry winter weather.
- 3) Clothes dryer fires account for about 15,600 structure fires, 15 deaths, and 400 injuries annually. The yearly national fire loss for clothes dryer fires in structures is estimated at \$99 million.
- 2) An outdoor experience that is meditative.

1) Demonstrates that small steps can make a difference. You don't have to wait for the government to take action.

"My #1 reason for hanging clothes: time management. When I dry clothes in the dryer (which I must do in Illinois in the winter) I need to be there when the dryer stops or everything comes out wrinkled, so I can't walk away except for short periods. When I line dry, I can walk away - go shopping, have fun, garden, whatever - and the clothes will be fine no matter how long they hang on the line after they're dry." - Marti Jernberg, Elgin, IL

**23-Jul-2008 9:25pm 68°**

Cork and Diane finally had weather that let them go for their balloon ride.

**New Teeth**

I am getting nearer to the finish of getting my teeth fixed. It will be nice to get to the end of this. It all started March last year. For a while there I was wondering if it would ever get finished. There have been so many interruptions in the last year and half. I guess that is what happens when you put thing off for 10 years before you start.

Tomorrow I have to go in at 7:45am for some more work. It is a good thing I enjoy the people at the dentist office. I have never been afraid to go to the dentist. Even having rotten teeth all my live and making many trips trying to get things straightened out it had always been fun for me.

**24-Jul-2008 1:58pm 84°**

I see I got carried away with the clothesline story. Sorry about that. Clotheslines are not for everyone. After getting that big electric bill last month I figured I was way over do to try to conserve energy. With energy price so high right now I am really trying to save money. Saving energy is the easiest way to start. A clothesline was a quick and easy way for me.

**25-Jul-2008**

After being out and around and talking to people I have been told that a lot people were tired this morning. I know all of us go through cycles and we have days like that. It seems when I am tired and dragging the many of the people I talk are too. Is that we are all in sync with each other or is it the weather?

Here is what my weather station was saying this morning between 5 and 9 o'clock.

I don't know if any of the answers are in here, but here they if you are interested.

Maybe it is our biorhythms were all the same. I wonder if I can get them. Let's see, my emotional and intellectual cycles were crossing and my physical cycle bottomed out on July 24<sup>th</sup>. Does that mean any thing?

The chart pictured here is from "Free and Easy Biorhythm Calculator v3.01" You can check your biorhythms. If you are in to biorhythms this is a free program you can put on you computer and have it when you need it. You can get it at <http://www.whitestranger.com/downloads.htm>. You can also get you

Biorhythm chart on line for free at [http://www.whitestranger.com/online\\_biorhythms.htm](http://www.whitestranger.com/online_biorhythms.htm). So there it is no need to download the program.

## **26-Jul-2008 11:03am 78°**

Long morning! I got up and went out for breakfast around 8:30 and just got home. Bob and Shirley were at Vaughan's having breakfast and I joined them and to visit. They both look good. Bob and Shirley used to run Vaughan's. It has been just over a year since Bob and Shirley passed Vaughan's over to Dave and Tristan to be the new management. I remember hearing about it while I was in Spain last year.

While there Mary told me that today is Marc's birthday. Remember Marc and Heather just had their second child. Wow, it is 2 weeks already! Mary says the Sadie is doing fine. Oh, Marc, Heather, and Olivia too.

### **Birthday**

We have a new person for the list of birthdays. Marc's birthday is today. Happy Birthday Marc!

### **Solar PC**

I have a PC that I can use to run the weather station using power from the sun. I think this PC will use a maximum of 30 watts. Yesterday I looked and it was using as little as 17 watts. I have to load all the software and make sure everything is configured correctly before I start using it to collect data. I do not want to just thought it in to the works and find out that I need to redo it. I can run this on 12 volts DC (car battery) or use the power supply and run it on 110-220 volts AC (House power). I will be working on this while I wait for the latch assembly for the door on the pickup. I will let you know when it is ready.

#### **Worth Pondering**

In politics, if you want anything said ask a man. If you want anything done, ask a woman. -- *Margaret Thatcher*

Source: <http://www.rvtravel.com/publish/newsletter/issue336.shtml>

#### **Trivia**

The first person to go over Niagara Falls in a barrel was a woman, Anna Edson Taylor, a former school teacher from Bay City, Michigan, who made the plunge on her 63rd birthday in 1901. Since then, another 15 have gone over the falls as a gimmick. Five died in their attempt.

#### **RV JOKE OF THE WEEK**

An RVer named Stanley was stopped by a game warden in Northern California as he was returning to his motorhome with a bucket full of still-alive fish. "Do you have a license to catch those fish?" the game warden asked. "No, sir. These are my pet fish," the man replied. "Pet fish?" the warden asked. "Yes, sir. Every night I take these fish down to the lake where I'm camped and let them swim around for awhile. When they hear my whistle, they jump right back into the bucket and I take them back to the motorhome."

"That's a bunch of baloney," the game warden said as he reached for his pad of citations. The man looked at the game warden for a moment and then said, "If you don't believe me, then follow me back to the lake to see how it works." Still suspicious, but curious,

the game warden agreed. And so they walked to the lake. There, the man poured the fish into the lake, where they disappeared into the water. "Okay," said the game warden. "Call them back."

"Call who back?"

"The fish," replied the warden.

"What fish?" asked the man.

I know a lot of you are not RVers. I don't know if I am really a RVer either. I do enjoy reading some of the stories and videos on the web site. If it you would like to you could check them out too. Just got "<http://www.rvtravel.com/>" and follow the links to all the articles you can find.

### **27-Jul-2008 9:17am 70°**

I thought I would sit down and write a couple things while I am doing my laundry. Well I don't have anything to say. Hummm, that isn't like me!

### **New Baby**

Tristan and David are new parents. Their first little baby is a girl and was born last night. Lillian is now one day old. Welcome to plant earth Lillian! Picture as soon as I get one.

**Lillian one day old**

### **28-Jul-2008 12:22pm 86°**

### **This Just In**

I received a picture of Lillian! Se

### **Spam**

I think I have been telling you that I get a lot of spam that is trapped before it even gets to my Inbox. Well, this picture got caught up in the Spam and I missed it. Today I learned to how to retrieve Spam that ends up in quarantine by mistake.

### **29-Jul-2008 5:52am 62°**

I woke up a little early this morning. I guess it was time to wake up of something. I was checking my email and I found a retirement story.

### **Humor to start your day**

*I thought you might enjoy this!*

Working people frequently ask retired people what they do to make their days interesting. Well, for example, the other day I went downtown and into a shop.. I was only there for about 5 minutes and when I came out there was a cop writing out a parking ticket.

I said to him, "Come on, man, how about giving a retired person a break?" He ignored me and continued writing the ticket. I called him a "Nazi." He glared at me and wrote another ticket for having worn tires. So I called him a "doughnut eating Gestapo." He finished the second ticket and put it on the windshield with the first. Then he wrote a third ticket.

This went on for about 20 minutes.

The more I abused him the more tickets he wrote. Personally, I didn't care. I came downtown on the bus, and the car that he was putting the tickets on had a bumper sticker that said "Obama in '08."

I try to have a little fun each day now that I'm retired. It's important to my health.

Source Email from Arlene

### **Vacation of Others**

I was out for breakfast at The Three Brothers and Sandi showed up. I thought her and Larry were on vacation. And Sandi doesn't work on Tuesday. Sandi and Larry were on vacation in Tennessee. They went on a 175 mile trail with a motorcycle. Sandi said it wasn't a path it was a highway that had many, many winding covers and wonderful scenery. I am now thinking maybe I need to go on another trip.

### **Sink Hole**

For you who have been telling me to about that sink hole in the street at end of my driveway I have contacted the City. Now I will wait and see what happens. They filled it with asphalt in April while I was on vacation after Cork told them. It is sinking and getting deeper so I guess it was time for me to listen to you and contact them again. Maybe it will get fixed before one of you fall in to it.

### **Solar Weather Station PC**

I have built a PC for the Weather Station. I got it down to about it used just 740 watts in 41-1/2 hours. That is an average of less than 18 watts per hours. That is less than the one half of the power refrigerators light used to use. Since my Solar will give me up 67 watts an hour, I might just pull this off running this PC on solar power alone.

It has been running for almost 2 days hooked up to household electricity now so I could measure how much power it was using. And it has been working just fine collecting the weather data. I now need to switch it back to the old computer while I get it ready to be hooked up to the wireless network and see how it works. I have been using the wireless network for security reasons. I think I know how to handle that now so it should work now.

If that works I have to figure how to hook the weather station up to it in the garage. I may have to move that weather station itself. If it doesn't work on the wireless network I may just route the wires from the house to the garage for the network and I can do the same for the weather station. I'm going to just do one step at a time one step at a time.

### **30-July-2008**

Today is Aunt Annie's Birthday. Aunt Annie has always been the second mom to me and my brothers and sister. Happy Birthday Mom Two!

### **31-Jul-2008 9:14am 74°**

I guess we are going to have a few hot days here the next few days. I need to go out and cut the grass. I waited too long. I have to add a few things to this newsletter first.

**Earth Quake**

On the radio the other day I heard that California had an earth quake. I looked up where it was located because I wondered if it was near Mike and Petra in Paso Robles. It wasn't it was about 240 miles from them.

While searching for the epicenter, I saw there was a magnitude 3.7 earth quake just 4-1/4 miles from Paso Robles on July 6th. Mike said that he felt that and knew what it was. He said that it felt like some one dropped a big rock. I he got up to leave the house and it was already over. I guess a 3.7 is quite small as earth quakes go.

The one the on the 29th was a magnitude 5.8 and centered 4.4 mi SE of Diamond Bar, CA. Even though it was bigger, I guess they didn't feel it at Mike's.

We haven't had a big earth wake near us since the magnitude 4.1, 8 miles NNW of Ottawa, IL on June 28th 2004.

If you want to know more about the earth quake try this <http://earthquake.usgs.gov/>. I had no idea how many earth quakes happen. They show 50 already this morning. These are mostly very small in magnitude they are still earth quakes nun-the-less.

**My Pension**

Some of you have heard me talk about my Woodstock Die Casting (Auto-Lite) pension. I have been trying to find it for over 2 years. After proving I worked there from 1966 to 1982. I have to find some way to prove that the gap in service in 1971 and 1980 were approved. I need 10 years without a break in service to receive a pension. They say they can not verify that these gaps in service were approved leaves. I can remember layoffs do the lack of work but I always returned went they called me back.

So I am trying to find my personal records to see what they say. If any of you can tell me who has these records the records it would help. I am in contact with Honeywell who is handling the pension. Now I have to just wait for some feedback.

**Cut the Grass**

It is only 10 o'clock and it is already 77° so I best get the grass cut.

### Birthdays

Jul 7	Annette's Mom	Aug 1	Trent
July 14	Sharon P	Aug 2	Pat
July 30	Aunt Annie	Aug 7	Lidia
Jul 9th	Diane	Aug 8	In 1988 The Light went on in Wriggly Field. It was raining on Aug. 8th, 1988 and the game was delayed or maybe not played at all
Jul 12	Sadie	Aug 9	Tammy B
Jul 26	Marc	Aug 15	Russ
Jul 26	Lillian	Aug 16	Scott
		Aug 17	Mom's ( My Mom)
		Aug 17	Mickey's
		Aug 23	Mary
		Aug 23	Taryn
		Aug 25	Betsy M

If you don't see you birthday or you want to make sure I have then let me know.

My master list is at <http://www.martysthoughts.info/randomthoughts/html/Birthdays.html>
